Vicon's All-New Digital Video Multiplexer

AURORA
2000

AURORA²⁰⁰⁰

Vicon's All-New Digital Video Multiplexer

Simplified programming and operation of an impressive feature set make AuroraA 2000 the most powerful and easiest-to-install multiplexer ever offered by Vicon.

AuroraA 2000 Features:

- 16-channel monochrome or color units
- Simplex, duplex or triplex operation
- 15X digital zoom with directional window
- "Easy Set-Up" menu option provides a step-by-step guide with help for system programming
- 16 X 12 motion grid increases update rates based on priority
- AGC auto-calibrate mode automatically adjusts camera signals to reduce flicker in multiscreen modes
- Auto-record macros store keystroke functions for time-based replay
- On-screen titling programmable via standard PC keyboard
- High-resolution output to VCR's produces high-quality recordings

RS-485 network links up to 32 AuroraA 2000's controllable through a master front panel

Digital option boards upgrade simplex units to duplex or triplex and increase live display refresh to an industry leading 90 frames/sec

Vicon's System Console connects AuroraA 2000's, NOVA matrix switchers and VCR's, creating a complete video system

High Resolution RGB output to SVGA display improves video quality

A simplified front panel means single-keystroke operation of main functions

Standard RS-422 and optional coaxial telemetry control offer increased flexibility in system design
